Keywords: Carcinoma, Prostate.

### Abstract:

Between 1976 and 1987, 477 patients underwent prostatectomy for clinically benign prostatic hyperplasia at the Jordan University Hospital. Sixteen cases of stage A incidental carcinoma were found. These patients were treated conservatively and followed up for a period ranging between 11 months and 12 years. The incidence, degree of histologic differentiation, invasiveness, and method of treatment are evaluated, and compared to the English literature.
